ShoWorks™

ShoWorks™ is the most popular exhibitor and entries management software used by almost all state and county fairs in North America. Easily process registration, judging, premium payouts, and auctions for all types of entries including creative & home arts, media, livestock, and more.

For over 20 years, ShoWorks has served entry offices and exhibitors by processing entries both online and on fairgrounds across the US and Canada. During this time, computing for fairs has evolved from a tool for only a few tech-minded operators to wide base of casual end-users including managers and CFEs, volunteers, judges, superintendents, exhibitors, club and school leaders. Security, user-friendliness, flexibility and scalability, Internet and mobile integration and back-office compatibility are just a few of the demands prompting a change in the way we look at entry software.
